In the Claims

- 1. (currently amended) An electrochemical gas sensor, comprising:
 - a substrate having a surface;
 - a first electrode deposited on said surface;
- a second electrode spaced apart from said first electrode and deposited on said surface for detecting a gas;

an electrolytic material in electrical contact with said first electrode and said second electrode for carrying a flow of current; and

said second electrode having a porosity of less than 5%, a pore size less than .12 micrometer at said pore size's greatest measurement, and a thickness less than .2 micrometer for controlling flooding.

- 2. (currently amended) The electrochemical <u>gas</u> sensor according to claim 1, wherein said porosity is less than 2%.
- 3. (currently amended) The electrochemical <u>gas</u> sensor according to claim 1, wherein said pore size is less than .05 micrometer at said pore size's greatest measurement.
- 4. (cancelled)
- 5. (currently amended) The electrochemical gas sensor according to claim 1, wherein said porosity is less than 1%.

Serial No. 10/029,507

Response to Official Action

- 6. (currently amended) The electrochemical <u>gas</u> sensor according to claim 1, wherein said pore size is less than .01 micrometer at said pore size's greatest measurement.
- 7. (currently amended) The electrochemical <u>gas</u> sensor according to claim 1, wherein said thickness is less than .1 micrometer for deterring flooding.
- 8. (currently amended) The electrochemical gas sensor according to claim 1, wherein said second electrode has negligible porosity.
- 9. (currently amended) The electrochemical <u>gas</u> sensor according to claim 1, wherein said second electrode is nonporous.
- 10. (currently amended) The electrochemical <u>gas</u> sensor according to claim 1, wherein said first electrode is sputter coated.
- 11. (currently amended) The electrochemical <u>gas</u> sensor according to claim 1, wherein said first electrode is vapor deposited.
- 12. (currently amended) The electrochemical gas sensor according to claim 1, wherein said second electrode is sputter coated.
- 13. (currently amended) The electrochemical <u>gas</u> sensor according to claim 1, wherein said second electrode is vapor deposited.
- 14. (currently amended) The electrochemical <u>gas</u> sensor according to claim 1, further including an acidic solution for hydrating said electrolyte.

Page 4 Serial No. 10/029,507 Response to Official Action

- 15. (currently amended) The electrochemical gas sensor according to claim 1, further including a reservoir for containing a solution to hydrate said electrolyte.
- 16. (currently amended) The electrochemical <u>gas</u> sensor according to claim 1, wherein each pore of said second electrode is less than .12 micrometer at its greatest measurement.
- 17. (currently amended) The electrochemical gas sensor according to claim 1, wherein said substrate has a pore less than .05 micrometer at its greatest measurement.
- 18. (currently amended) The electrochemical gas sensor according to claim 1, wherein said substrate has a pore less than .01 micrometer at its greatest measurement.
- 19. (currently amended) The electrochemical <u>gas</u> sensor according to claim 1, wherein said surface of said substrate has negligible porosity.
- 20. (currently amended) The electrochemical <u>gas</u> sensor according to claim 1, wherein said surface of said substrate is generally flat.
- 21. (currently amended) The electrochemical <u>gas</u> sensor according to claim 1, wherein said surface of said substrate has a porosity of less than 5%.
- 22. (currently amended) The electrochemical gas sensor according to claim 1, wherein said surface of said substrate has a porosity of less than 2%

- Response to Official Action
- 23. (currently amended) The electrochemical gas sensor according to claim 1, wherein said surface of said substrate has a porosity of less than 1%.
- 24. (currently amended) The electrochemical <u>gas</u> sensor according to claim 1, wherein said electrolytic material includes:
 - an acidic solution for hydrating said electrolyte.
- 25. (currently amended) The electrochemical <u>gas</u> sensor according to claim24, wherein said acidic solution is 30% acidic.
- 26. (currently amended) The electrochemical <u>gas</u> sensor according to claim24, wherein said acidic solution is 50% acidic.
- 27. (currently amended) An electrochemical gas sensor, comprising:
 - a substrate having a surface;
 - a first electrode deposited on said surface;
- a second electrode spaced apart from said first electrode and deposited on said surface for detecting a gas;
- an electrolytic material in electrical contact with said first electrode and said second electrode for carrying a flow of current; and
- said second electrode having a porosity of less than 5%, a pore size greater than 0 micrometer and less than .12 micrometer, and a thickness less than 1 micrometer for controlling flooding.

Page 6 Serial No. 10/029,507 Response to Official Action

- 28. (currently amended) The electrochemical <u>gas</u> sensor according to claim 27, wherein said pore size is greater than 0 micrometer and less than .05 micrometer at said pore size's greatest measurement.
- 29. (currently amended) The electrochemical <u>gas</u> sensor according to claim 27, wherein said pore size is greater than 0 micrometer and less than .01 micrometer at said pore size's greatest measurement.
